

**LAPORAN PRAKTIKUM  
PEMROGRAMAN BERBASIS FRAMEWORK**

**WEEK 2: Setup Project Next.js menggunakan Pages Router**

**Disusun Oleh :**  
Ghoffar Abdul Ja'far 2341720035/TI3B

**JURUSAN TEKNOLOGI INFORMASI  
POLITEKNIK NEGERI MALANG  
2025/2026**

---

## A. Langkah Kerja Praktikum

### Langkah 1 – Pengecekan Lingkungan

1. Buka terminal / command prompt.
2. Jalankan perintah berikut:
3. node -v

```
E:\Kuliah\Kuliah\Matkul_Semester_6\Pemrograman Berbasis Framework>node -v  
v24.11.0
```

```
E:\Kuliah\Kuliah\Matkul_Semester_6\Pemrograman Berbasis Framework>
```

4. npm -v

```
E:\Kuliah\Kuliah\Matkul_Semester_6\Pemrograman Berbasis Framework>npm -v  
11.6.1
```

```
E:\Kuliah\Kuliah\Matkul_Semester_6\Pemrograman Berbasis Framework>
```

5. Pastikan Node.js dan npm sudah terinstal. Jika belum terinstall maka Install pada alamat berikut : <https://nodejs.org/en/download>

6. Git -V

```
E:\Kuliah\Kuliah\Matkul_Semester_6\Pemrograman Berbasis Framework>git -v  
git version 2.44.0.windows.1
```

```
E:\Kuliah\Kuliah\Matkul_Semester_6\Pemrograman Berbasis Framework>
```

7. Jika belum install maka install pada alamat berikut : <https://git-scm.com/install/windows>
- 

### Langkah 2 – Membuat Project Next.js

1. Buat direktori baru dan masuk ke direktori kerja

```
PS E:\Kuliah\Kuliah\Matkul_Semester_6\Pemrograman Berbasis Framework\week 2> mkdir praktikum  
  
Directory: E:\Kuliah\Kuliah\Matkul_Semester_6\Pemrograman Berbasis Framework\week 2  
  
Mode          LastWriteTime        Length Name  
----          -----          ----  --  
d---  2/20/2026  1:54 PM           praktikum  
  
PS E:\Kuliah\Kuliah\Matkul_Semester_6\Pemrograman Berbasis Framework\week 2>
```

2. Jalankan perintah:

```
PS E:\Kuliah\Kuliah\Matkul_Semester_6\Pemrograman Berbasis Framework\week 2\praktikum> npx create-next-app@13.4.7 my-app
✓ Would you like to use TypeScript with this project? ... No / Yes
✓ Would you like to use ESLint with this project? ... No / Yes
✓ Would you like to use Tailwind CSS with this project? ... No / Yes
✓ Would you like to use 'src/' directory with this project? ... No / Yes
✓ Use App Router (recommended)? ... No / Yes
✓ Would you like to customize the default import alias? ... No / Yes
Creating a new Next.js app in E:\Kuliah\Kuliah\Matkul_Semester_6\Pemrograman Berbasis Framework\week 2\praktikum\my-app.

Using npm.

Initializing project with template: default

Installing dependencies:
- react
- react-dom
- next
- typescript
- @types/react
- @types/node
- @types/react-dom
- eslint
- eslint-config-next
/
```

3. Kita menggunakan versi 13.4.7 bukan yang latest (**npx create-next-app@latest nextjs-pages-router**) dan Tunggu hingga proses instalasi selesai.

4. Masuk ke folder projectnya

```
PS E:\Kuliah\Kuliah\Matkul_Semester_6\Pemrograman Berbasis Framework\week 2\praktikum> cd my-app
PS E:\Kuliah\Kuliah\Matkul_Semester_6\Pemrograman Berbasis Framework\week 2\praktikum\my-app>
```

5. Tunggu hingga proses instalasi selesai.

---

### Langkah 3 – Menjalankan Server Development

1. Masuk ke folder project:

```
PS E:\Kuliah\Kuliah\Matkul_Semester_6\Pemrograman Berbasis Framework\week 2\praktikum> cd my-app
PS E:\Kuliah\Kuliah\Matkul_Semester_6\Pemrograman Berbasis Framework\week 2\praktikum\my-app>
```

2. Jalankan aplikasi:

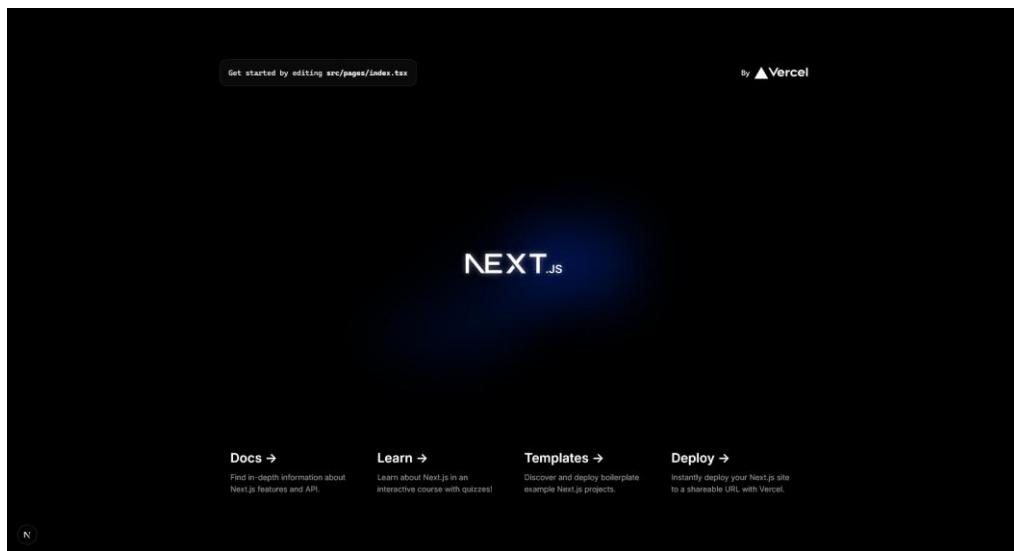

**npm run dev**

```
PS E:\Kuliah\Kuliah\Matkul_Semester_6\Pemrograman Berbasis Framework\week 2\praktikum\my-app> npm run dev
> my-app@0.1.0 dev
> next dev

▲ Next.js 16.1.6 (TurboPack)
- Local:      http://localhost:3000
- Network:    http://192.168.69.146:3000

✓ Starting...
Attention: Next.js now collects completely anonymous telemetry regarding usage.
This information is used to shape Next.js' roadmap and prioritize features.
You can learn more, including how to opt-out if you'd not like to participate in this anonymous program, by
visiting the following URL:
https://nextjs.org/telemetry
```

3. Buka browser dan akses: <http://localhost:3000>

## Langkah 4 – Mengenal Struktur Folder

---

Amati folder utama:

- pages/ → tempat routing halaman

```
└─ src
    └─ pages
        > api
            _app.tsx
            _document.tsx
            index.tsx
```

- public/ → asset statis

```
└─ public
    favicon.ico
    next.svg
    vercel.svg
```

- styles/ → file CSS

```
└─ styles
    globals.css
    Home.module.css
```

- package.json → konfigurasi project

```
package.json > ...
1  {
2    "name": "my-app",
3    "version": "0.1.0",
4    "private": true,
5    "scripts": {
6      "dev": "next dev",
7      "build": "next build",
8      "start": "next start",
9      "lint": "next lint"
10    },
11    "dependencies": {
12      "@types/node": "25.3.0",
13      "@types/react": "19.2.14",
14      "@types/react-dom": "19.2.3",
15      "eslint": "9.39.2",
16      "eslint-config-next": "16.1.6",
17      "next": "16.1.6",
18      "react": "19.2.4",
19      "react-dom": "19.2.4",
20      "typescript": "5.9.3"
21    }
22 }
```

- **gitignore** -> **file konfigurasi di Git** yang berfungsi untuk **memberitahu Git file atau folder apa saja yang TIDAK perlu di-track / di-commit** ke repository.

```
.gitignore
1  # See https://help.github.com/articles/ignoring-files/ for more about .
2
3  # dependencies
4  /node_modules
5  /.pnp
6  .pnp.js
7
8  # testing
9  /coverage
10
11 # next.js
12 /.next/
13 /out/
14
15 # production
16 /build
17
18 # misc
19 .DS_Store
20 *.pem
21
22 # debug
23 npm-debug.log*
24 yarn-debug.log*
25 yarn-error.log*
26
27 # local env files
28 .env*.local
29
30 # vercel
31 .vercel
32
33 # typescript
34 *.tsbuildinfo
35 next-env.d.ts
```

---

## Langkah 5 – Modifikasi Halaman Utama

1. Buka file:
2. pages/index.js
3. Ubah isi halaman, misalnya:

```
1  import Head from "next/head";      Remove this unus
2  import Image from "next/image";     Remove this un
3  import { Inter } from "next/font/google";
4  import styles from "@/styles/Home.module.css";
5
6  const inter = Inter({ subsets: ["latin"] });
7
8  export default function Home() {
9    return (
10      <div>
11        <h1>Praktikum Next.js Pages Router</h1>
12        <p>Mahasiswa D4 Teknologi Informasi</p>
13      </div>
14    );
15  }
16
```

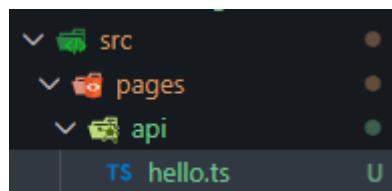

4. Simpan dan lihat perubahan di browser.

---

## Langkah 6 – Modifikasi API

1. Buka folder api

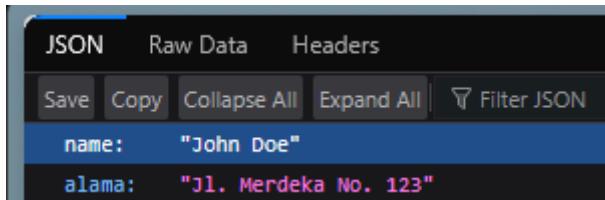

2. Modifikasi hello.ts

```

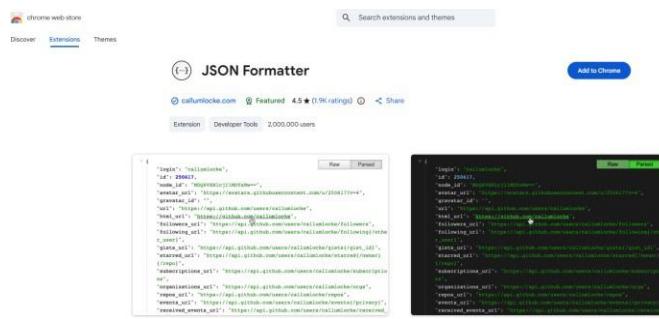

1 // Next.js API route support: https://nextjs.org/docs/api-routes/introduction
2 import type { NextApiRequest, NextApiResponse } from 'next'
3
4 type Data = {
5   name: string
6   alama: string
7 }
8
9 export default function handler(
10   req: NextApiRequest,
11   res: NextApiResponse<Data>
12 ) {
13   res.status(200).json({ name: 'John Doe', alama: 'Jl. Merdeka No. 123' })
14 }

```

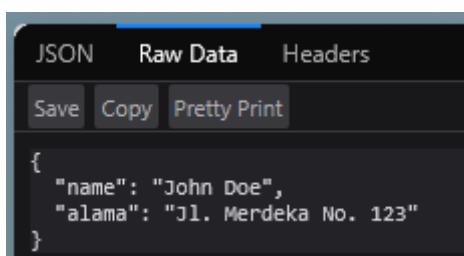

3. Jalankan browser dengan Alamat <http://localhost:3000/api/hello>

4. Tambahkan extensions chrome

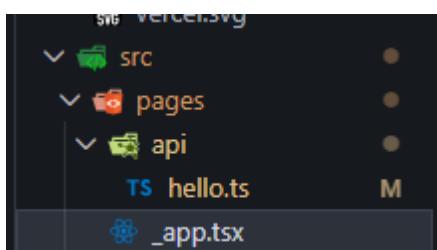

5. Jalankan browser chrome

## Langkah 7 – Modifikasi Background

1. Buka file \_app.tsx

2. Modifikasi menjadi berikut

```

1 // import '@/styles/globals.css'
2 import type { AppProps } from 'next/app'
3
4 export default function App({ Component, pageProps }: AppProps) {
5   return <Component {...pageProps} />
6 }

```

3. Jalankan localhost

---

**Langkah 8 – Setup ext pada VSCode (opsional)**

1. Auto rename

2. Windsurf Plugin: Free AI-powered code acceleration toolkit

3. Console Ninja

4. VS Code ES7+ React/Redux/React-Native/JS snippets

5. VS Code ESLint extension

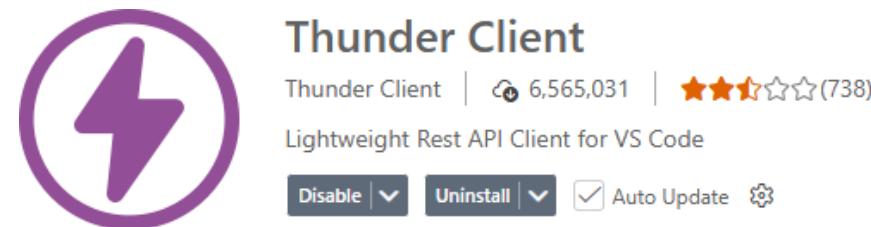

## 6. Git Graph extension for Visual Studio Code

## 7. Prettier

## 8. Asa

---

## B. Tugas Praktikum

### Tugas 1 (Wajib)

- Buat halaman baru about.js di folder pages.
- Tampilkan:
  - Nama Mahasiswa
  - NIM
  - Program Studi

A screenshot of a code editor showing the content of a file named "about.js". The code defines a function "About" that returns an object containing an array of objects. Each object has properties for name, NIM, and program study. A red box highlights the first row of a table, with a tooltip "Add a valid header row or column to this <table>".

```
1 // export default function About() {
2   return (
3     <div>
4       <h1>about Me</h1>
5       <table>    Add a valid header row or column to this "table".
6         <tr>
7           <td>Nama Mahasiswa</td>
8           <td></td>
9           <td>Ghoffar Abdul Ja'far</td>
10          </tr>
11         <tr>
12           <td>NIM</td>
13           <td></td>
14           <td>2341720035</td>
15          </tr>
16         <tr>
17           <td>Program Studi</td>
18           <td></td>
19           <td>D4 Teknik Informatika</td>
20          </tr>
21        </table>
22      </div>
23    );
24 }
```

### Tugas 2 (Pengayaan)

- Tambahkan minimal 1 link navigasi dari halaman utama ke halaman about.

A screenshot of a Next.js application. On the left is a sidebar with the title "Praktikum Next.js Pages Router" and a "Tentang Saya" link. The main content area has a title "Tentang Saya" and contains student information: "Nama Mahasiswa : Ghoffar Abdul Ja'far", "NIM : 2341720035", and "Program Studi : D4 Teknik Informatika".

Praktikum Next.js Pages Router

Mahasiswa D4 Teknologi Informatika

[Tentang Saya](#)

Tentang Saya

Nama Mahasiswa : Ghoffar Abdul Ja'far

NIM : 2341720035

Program Studi : D4 Teknik Informatika

---

```
<Link
  href="/about"
>
  Tentang Saya
</Link>
```

### C. Pertanyaan Refleksi

1. Mengapa Pages Router disebut sebagai routing berbasis file?  
= Pages Router disebut routing berbasis file karena setiap file di folder pages/ otomatis menjadi route sesuai nama filenya.
2. Apa perbedaan Next.js dengan React standar (CRA)?  
= Next.js berbeda dari React standar seperti Create React App karena sudah menyediakan routing, SSR/SSG, dan optimasi bawaan tanpa konfigurasi tambahan.
3. Apa fungsi perintah npm run dev?  
= Perintah npm run dev berfungsi untuk menjalankan server development agar aplikasi bisa diakses dan diuji secara lokal.
4. Apa perbedaan npm run dev dan run build ?  
= npm run dev digunakan untuk menjalankan aplikasi dalam mode pengembangan, sedangkan npm run build digunakan untuk membuat versi produksi yang sudah dioptimalkan.
